

ROVTECH SOLUTIONS

Harsh Environment Problem Solvers

Underwater Camera Systems

The Camera System is a self contained unit comprising of everything you need, (excluding deployment method) to carry out underwater inspections. The system has been hired by many companies needing a short term solution. A deployment method/equipment can be provided but this will need to be tailored to your requirements.

The system can use a variety of handheld solutions. Whether you require a simple handle featuring a camera and/or light or an extendable pole that will reach over three metres then Rovtech Solutions has the answer.

The system has a built in viewing screen and a recording facility which enables you to transfer all video from the unit to a computer for review at a later date.
